

Evaluation Kit

Experience the future of power delivery

Designed for R&D teams to explore wire-free power, our Eval Kit provides everything you need to jump-start innovation. It includes a **transmitter** with a flexible wire loop that can be embedded into a surface to create a Wire-Free Power Zone. Alongside, you'll find a **variety of receivers** in different shapes, sizes, and specifications that can be integrated into your devices, enabling them to receive power wirelessly.

With ETI's Eval Kit, your team can easily experiment, prototype, and experience the magic of our wire-free power solutions. See firsthand how our technology can reduce the need for batteries, eliminate power cords, and open new possibilities for design. Once you love it, we'll talk licensing.

Our Eval Kit has received FCC & CE certification.

Instructions & Guidance

Would you like a kit?

Ready to revolutionize how you power your products? Contact us to discuss your initiative

Due to the overwhelming response to the Wire-free [*Power Video that Matt of DIY Perks*](#) produced on YouTube, we are working through a high volume of requests. We **WILL** reply to all requests, but please **give us time** as we are a small team.

and purchase your evaluation kit.

**In the meantime, we appreciate your patience—and
your enthusiasm for wire-free power!**
